

2021 CLINICAL FOCUS Formulary

The following is a list of the most commonly prescribed drugs. It represents an abbreviated version of the drug list (formulary) that is at the core of your prescription-drug benefit plan. The list is not all-inclusive and does not guarantee coverage. In addition to using this list, you are encouraged to ask your doctor to prescribe generic drugs whenever appropriate.

PLEASE NOTE: Brand-name drugs may move to nonformulary status if a generic version becomes available during the year. Not all the drugs listed are covered by all prescription-drug benefit programs; check your benefit materials for the specific drugs covered and the copayments for your prescription-drug benefit program. For specific questions about your coverage, please call the phone number printed on your member ID card.

KEY	For the member: Your specific prescription benefit plan design may not cover certain products or categories, regardless of their appearance in this document. Products recently approved by the US Food and Drug Administration (FDA) may not be covered upon release to market. [INJ] - Injectable Drug ER = Extended-Release DR = Delayed Release AE = Age Edit LD= Limited Distribution PA = Prior Authorization QL = Quantity Limits ST = Step Therapy † Indicates specialty medications WellDyne may contact your provider after receiving a prescription to request consideration of a drug list product or generic equivalent. This may result in your provider prescribing, when medically appropriate, a different brand-name product or generic equivalent in place of the original prescription. Generic medications contain the same active ingredients as their corresponding brand-name medications, although they may look different in color or shape. They have been FDA-approved under strict standards. In most instances, a brand-name drug for which a generic product becomes available will be designated as a non-preferred or excluded option upon release of the generic product to the market. For the physician: Generics should be considered the first-line of prescribing. Please prescribe preferred products and allow generic substitutions when medically appropriate. Brand-name drugs are listed in CAPITAL letters; generic drugs are listed in lower case letters. This drug list represents a summary of prescription coverage. It is not all-inclusive and does not guarantee coverage. The member's specific prescription benefit plan design may not cover certain products or categories, regardless of their appearance in this document. Products recently approved by the FDA may not be covered upon release to market.
